

## Maintenance free infrastructure.

The **ArmorGalv®** technology is an environment-friendly process that offers superior corrosion protection and wear resistance as well as anti-galling properties. The **ArmorGalv®** technology is in fact a modern, greatly improved, version of the well-established Sherardizing zinc/iron vapor diffusion process.

**ArmorGalv®** is not merely a sacrificial coating. It diffuses zinc atoms into the surface of any steel part, including wrought and/or forged steel, castings, powdered metal, and all grades of stainless steel, creating a zinc/iron alloy, which has proven to last decades in the most severe environments.

*Cross section of **ArmorGalv®***

*M6 cup head screw*

*Cross section of screw showing Coating Precision and uniformity*

### WHERE IS THE **ArmorGalv®** TECHNOLOGY USED IN INFRASTRUCTURE?

*Channel tunnel and Hong Kong tunnel – steel hardware*

*San Pablo River bridge Jacksonville Fl. – steel hardware*

**DISTEK N.A. LLC**

**ArmorGalv<sup>®</sup>**

*Environment-friendly thermal Diffusion Galvanizing*

*Kansai airport – roof support joints*

*Railway fasteners across Europe*

*Pole line hardware across the US as well as transmission line hardware is now being protected with **ArmorGalv<sup>®</sup>***

**Modular steel structures that are maintenance - free for decades, even when installed on islands, sea-shore and other severe environments.**
